and approve or deny the project within 1 year. This application was certified complete as of July 30, 1979.

EXHIBIT: A. Negative Declaration.

IT IS RECOMMENDED THAT THE COMMISSION:

- 1. DETERMINE THAT AN EIR HAS NOT BEEN PREPARED FOR THIS PROJECT BUT THAT A NEGATIVE DECLARATION HAS BEEN PREPARED BY THE COMMISSION'S STAFF.
- 2. CERTIFY THAT NEGATIVE DECLARATION NO. 250 HAS BEEN COMPLETED IN COMPLIANCE WITH CEQA OF 1970, AS AMENDED, AND THE STATE GUIDELINES; AND THAT THE COMMISSION HAS REVIEWED AND CONSIDERED THE INFORMATION CONTAINED THEREIN.
- 3. DETERMINE THAT THE PROPOSED PROJECT WILL NOT HAVE A SIGNIFICANT EFFECT ON THE ENVIRONMENT.

#### NEGATIVE DECLARATION

Project Applicant:

Olin Jones Sand Co. 1725 Marina Vista Martinez, CA 94553

(415/229-4800)

Project Location:

Alcatraz Shoals, West of Alcatraz Island, in San Francisco Bay, San Francisco County.

Project Description:

The proposal involves hydraulically dredging sand at a rate of 100,000 cubic yards per year with a diesel-powered hopper dredge and off-loading at various points as needed.

This NEGATIVE DECLARATION is prepared pursuant to the requirements of the California Environmental Quality Act (Section 21000 et. seq. of the Public Resources Code), the State EIR Guidelines (Title 14, Section 15000 et. seq. of California Administrative Code), and the State Lands Commission regulations (Section 2901 et. seq. of California Administrative Code).

Based upon the attached Initial Study, it has been found that:

 $\frac{X}{X}$  the project will not have a significant effect on the environment.

 $\frac{1}{x}$  the mitigation measures included in the project will avoid potentially significant effects.

Contact Person: Ted T. Fukushima State Lands Commission 1807-13th Street Sacramento, CA 95814

COMMENTS RECEIVED FROM REVIEW OF INITIAL STUDY CHECKLIST

1. United States Coast Guard

Twelfth Coast Guard District

2. National Oceanic and Atmospheric Administration

National Marine Fisheries Service

COMMENTS :

These two agencies reviewed the proposed project and had no comment to make.

3. The Resources Agency

Department of Fish and Game

COMMENT:

"#60 Recreation. We would check 'maybe' rather than "no'. The project area is a popular Striped Bass fishing area. Modifications in topography may temporarily alter fish schooling and feeding in the area and thereby reduce fishing success. We agree with the Negative Declaration finding."

**RESPONSE**:

Operations in lease area will not be carried out on weekends or holidays so as to not interfere with recreational boating and fishing. (See Item 5 below).

4. The Resources Agency

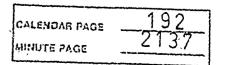

Department of Conservation - Division of Mines & Geology

COMMENT :

Background Information

Project Description

The project description does not include the number of acres the proposed lease area will cover, nor the number of years in the lease term. This information is necessary to determine whether a reclamation plan is required for the commercial extraction operation under the 1975 Surface Mining and Reclamation Act, as described in CDMG Note 50 and Special Publication 51 sent with the June 18 comments on W 40140.

This figure The project includes an area of 513 acres. This figure of the lease The term of the lease renewal berick ine project includes an area OF Did acres. Inis rigure will be added to the site map. The term of the lease is tentatively set for five years with one renewal period of five years. The lease includes as a standard provision is tentatively set for five years with one renewal period of five years. The lease includes as a standard provision the requirement that the lessee comply with all valid laws rules and regulations of federal, state and local RESPONSE : the requirement that the lessee comply with all valid laws, rules and regulations of federal, state and local governments. This will require the lessee to obtain any necessary normite and approval of a reclamation plan governments. Inis Will require the Tessee to obtain any necessary permits and approval of a reclamation plan, if required, from the local lead agency. COMMENT : Environmental Impacts If the extraction plans do not specify uniform surface skimming of sand from the entire acreage of the lease LE UNE extraction plans do not specily uniform surface skimming of sand from the entire acreage of the lease area resulting in the creating of horrow nite or trou skimming of sand from the entire acreage of the lease area, resulting in the creating of borrow pits or troughs on the bay floor, what will be the effects of the resulting waterway bottom topography on water currents and erosion Earth, Nos. 3 and 6 Waterway bottom topography on water currents and erosion The extraction plans depend on the operation plan and The encourage ful hidder The extraction plans depend on the operation plan and equipment used by the successful bidder. The transitory offects of the removal of a volume of eard from the potential? equipment used by the successful brader. The transmission of sand from this effects of the removal of a volume of sand from this dynamically complex area is heliteved to be minor lot errects or the removal of a volume or sand from this dynamically complex area is believed to be minor, local and to have insignificant adverse effects (See Item 5 RESPONSE : and to have insignificant adverse effects. (See Item 5 below). Although the cumulative impacts on San Francisco Bay of this proposed dredging operation may be minor have any Findings of Significance, No. 64 Authough the cumulative impacts on San rrancisco bay of this proposed dredging operation may be minor, have any recent studies been undertaken or evaluated to determine the cumulative impacts of all of the commercial operation COLEMENT : recent studies been undertaken or evaluated to determine the cumulative impacts of all of the commercial operations The latest studies of San Francisco Bay and the project area available are listed below and deal with conditions upon the bay? The Latest Studies of San Francisco bay and the project area available are listed below and deal with conditions of shoaling dredging operations and the effect on the of shoaling, dredging operations and the effect on the biologic community: RESPONSE : Dredge Disposal Study, San Francisco Bay and Estuary. U.S. Army Engineer District, San Francisco, August 1975. biclogic community: 93 Appendix D. 1. MINUTE PAGE شننت متشنية تستشقلن -2-

- Sedimentation of Alcatraz Presidio and Point Knox Shoals in San Francisco Bay. Woodward-Lundgren and Associates, February 1974.
- Geologic and Engineering Aspects of San Francisco Bay Fill.
   Special Report 97 California Division of Mines and Geology, 1969.

The scope and consideration of a new study would require a major hydraulic/hydrologic study and a sizeable model study with the addition of extensive field data. (See Item 5 below).

#### 5. San Francisco Bay Conservation and Development Commission

#### COMMENT:

... A BCDC permit will be required prior to any work ... discharges of overflow waters is regulated by the Regional Water Quality Control Board.

### **RESPONSE:**

The Lessee will be required to obtain the necessary permit from BCDC, Regional Water Quality Control Board and U.S. Army Corps of Engineers. (See Item 4 above).

#### COMMENT:

Obviously, there will be the temporary destruction of the bottom area involved in the dredging operation. This will deteriorate to some extent the fish and wildlife habitat of the area.

#### **RESPONSE**:

(BCDC Draft Negative Declaration, File 4-77)

"The Corps of Engineers in a study (August 1975) of the biological communities of the adjacent Alcatraz federal disposal site concluded that nearly all of the 133 species collected could be considered transient. Such populations of marine organisms would be expected to be lower at the subject shoal areas than elsewhere in the Bay because of past and present dredging, suspended sediments from the Alcatraz spoils deposit site, and the swift currents at the Golden Gate. In addition, the Marine Fisheries Section of the California Department of Fish and Game in their continuing study of crabs, has concluded that the swift currents at the Golden Gate and sedimentation from the nearby Alcatraz disposal site inhibit crabs from living in the subject shoal areas. For the above reasons, sand

CALENDAR PAGE

MINUTE PAGE

- 3-

extraction at the Alcatraz Shoal area is not expected to significantly affect the habitat value for any marine organisms, especially for crabs."

#### COMMENT:

Item I-33 states that there will be no substantial depletion of any nonrenewable resources. It appears that when taken in connection with other existing and proposed dredging operations nearby, there may be some depletion of sand resources.

#### RESPONSE :

(BCDC Draft Negative Declaration 4-77)

"The Alcatraz, Presidio and Point Knox Shoal areas have been regularly dredged by private parties over a period of 30 years. Public agencies have also used these shoal areas as a source of sand, the maximum removal being 4,000,000 cubic yards in 1965 by the Bay Area Rapid Transit District. In spite of past large extractions, the California Division of Mines and Geology in 1969 the California Division of Mines and Geology in 1969 reported that the current rate of use does not suggest that Bay sources of sand will be depleted rapidly. It is estimated that the present volume of sand within these shoal areas is 70,000,000 cubic yards with a replenishment rate of 1,500 cubic yards per year."

These areas could contain approximately 150 years of productive capability. In addition, the sand resources in the Southhampton Shoal and Pinole Shoal of San Pablo Bay greatly increase the reserves to fill the needs of the San Francisco Bay Area. Since the bulk of dredged sand is used in the construction industry in the Bay Area, the use of alternative upland sites would have a greater adverse impact on the human environment with greater expenditure of energy, more vehicular traffic, higher housing costs, degradation of land areas and loss of wildlife habitat.

#### COMMENT:

Item S-60 states that there will be no impact upon Recreational opportunities. The staff believes there may be an adverse impact upon recreational opportunities unless appropriate mitigation measures are implemented.

#### RESPONSE :

See Item 3 above.

CALENDAR PAGE 195 MINUTE PAGE 2140

-4-

#### COMMENT:

In previous BCDC permits of similar nature, the following mitigation measures were required to be implemented to reduce any adverse impact from the project on the environment.

#### **RESPONSE**:

The following mitigation measures suggested by the BCDC will be incorporated into the lease binding the successful bidder. (See also Item 4 above).

- Dredging operations shall not occur on weekends or holidays to prevent conflicts with the recreational use of the area;
- Dredging operations shall comply with the Operating Procedures for the Vessel Traffic Safety System of San Francisco Bay, monitored by the U.S. Coast Guard, to avoid any hazard to commercial or military navigation;
- 3. Dredging operations shall be carried out in accordance with the recommendations of the California Department of Fish and Game to avoid interference with nearby popular fishing areas; and
- 4. At the request of the BCDC staff, observers, including staff members of the U.S. Fish and Wildlife Service and the Department of Fish and Game, shall be allowed to come aboard the dredge to observe the dredging operations and to gather information on any effects that hydraulic sand dredging may have on aquatic resources.

.

- 63. Does the project have the potential to achieve short-term, to the disadvantage of long-term, environmental goals?
- 64. Does the project have impacts which are individually limited, but cumulatively considerable?
- 65. Does the project have environmental effects // / which will cause substantial adverse effects on human beings, either directly or indirectly?

-7-

# III. DISCUSSION OF ENVIRONMENTAL EVALUATION

#3. The sand dredging operation will alter the topography temporarily however, as sand continues to migrate into the proposed lease area, there should be no significant irreversible environmental impact.

#6. Same as #3 above.

IV. DETERMINATION

On the basis of this initial evaluation:

 $\square$ 

I find the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on an attached sheet have been added to the project. A NEGATIVE DECLARATION will be prepared.

I find the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
