Laboratory analysis of samples derived from augering indicates that bentonite clay present may contain the appropriate physical properties allowing the material to be suitable for feed grade sales. American Colloid Company desires a one year extension of their mineral prospecting permit to perform additional augering and laboratory analysis to more fully assess the location, grade, and marketability of the bentonite deposit.
2. After reviewing the request for extension of the permit, staff believes there are no circumstances surrounding the project nor changes in the environment or the project that indicate the proposed action will have a significant effect on the environment.
3. The primary term of a Prospecting Permit is two years. The Commission may, in its discretion, extend the term for one additional year.
4. The renewal is in the best interest of the State.
