OTHER PERTINENT INFORMATION:

1. The restoration project will result in a beneficial change to the tidelands of San Francisco Bay. An area of historic tidal marsh will be restored to tidal action and a section of non-tidal brackish marsh will be retained.
2. This restoration project will occur on a filled and degraded historic tidal marsh site of the North Fork Gallinas Creek within the City of San Rafael. The project goals are to create a diverse habitat by restoring tidal marsh and retaining the existing salt marsh and the current acreage of fresh/brackish wetlands.

Restoration would be accomplished through the excavation of 2,800 cubic yards of material on the northeastern portion of the site which would be deposited in depressed areas of the southwestern portion of the site to restore tidal action and to allow wetland vegetation to naturally recolonize.

No structures will be constructed. All earth moving activity will be conducted under the direction of the California Department of Fish and Game, Region 3, Yountville.

The project is favored by the Marin Audubon Society. The project is funded with monies from fines imposed by the Regional Water Quality Board on the City of San Rafael for water quality and habitat impacts from the spill of 400,000 gallons of raw sewage into the San Rafael Canal. Restoration of the San Rafael Canal was not proposed as the Corps was already proceeding with mitigation for the San Rafael tidal protection project.

3. Pursuant to the Commission's delegation of authority and the State CEQA Guidelines (14 Cal. Code Regs. 15061), the staff has determined that this activity is exempt from the requirements of the CEQA as a categorically exempt project. The project is exempt
