Mr. Greg Scott
Chief, Mineral Resources Management Division
California State Lands Commission
200 Oceangate, 12th Floor
Long Beach, CA 90802-4331

SUBJECT: **REQUEST FOR APPROVAL OF THE FINAL REPORT AND CLOSING STATEMENT FOR THE ANNUAL PLAN (JULY 1, 2008 – JUNE 30, 2009)**

Dear Mr. Scott:

In accordance with provisions of Part IV, Section C, of the Annual Plan, we are submitting for your approval this final report and closing statement to the Annual Plan covering the period July 1, 2008 through June 30, 2009. This report contains a reconciliation of Unit activities by category.

DEVELOPMENT DRILLING

The Development Drilling category provides funding for all drilling and re-drilling activity, as well as maintenance and replacement of drilling equipment within the Unit.

Operations Review

FY 2009 was an extraordinary period for the Unit in terms of oil price fluctuation. During the Plan period, the oil price topped \$133/bbl in July 2008 and bottomed at \$25/bbl in February 2009. Due to extreme fluctuations in the price of oil, the operating strategy was changed accordingly from growth to cash flow management. During the Plan period 31 drill wells were completed; however, 23 of them were drilled in the first half of FY 2009 when the oil price was high. Following is a listing of both new completions and re-drills by zone:

Zone	New Completions			Redrills		
	Prod	Inj	Total	Prod	Inj	Total
Tar	0	0	0	0	0	0
Ranger	6	7	13	5	1	6
Terminal	2	3	5	0	1	1
UP-Ford	3	0	3	1	0	1
237	2	0	2	0	0	0
Totals	13	10	23	6	2	8

On June 30, 2009, the total number of wells in the Unit was 1,348, of which 710 were active producers, 458 were active injectors, and 180 wells were shut in due to mechanical or reservoir related issues. Excluded from these totals are the abandoned wells.

Budget to Actual Variance

The Plan provided funds for 58 new and redrilled wells that were to be drilled with two full-time and one half-time drilling rigs. The execution of the proposed Plan was on track for the first half of the FY 2009 as 23 drill wells were completed during that period. However, due to lower oil prices, the drilling activity was significantly reduced during the second half of FY 2009. The reduction in drilling rig count from three to one resulted in 31 wells being drilled in comparison to the 58 wells in the Plan.

Total spending for Development Drilling was \$61.3 million, which is \$28.7 million below Plan. This difference was mainly driven by the lower drilling activity versus Plan. The plan included \$11.3 million for drilling rig maintenance, drilling support and drill rig upgrades. However, the total spending was \$8.1 million. Release of the two drilling rigs has resulted in lower spending in this category.

OPERATING EXPENSE

The Operating Expense Category provides funding for the ongoing cost of day-to-day well production and injection operations necessary for producing, processing, and delivering crude oil and gas, for all electric power costs and abandonment costs.

Operations Review

- Unit oil shipments during the Plan period averaged 27,716 bbls/day, which was 415 bbls/day higher than the Plan estimate. The base oil rate decline was lower than expected primarily due to the success of waterflood management initiatives instituted in the Unit during the second half of FY 2008. The oil production potential was within the historic variations. The number of wells shut-in for voidage and repair was also in line with historic levels.
- Gas production averaged 12,555 mcf/day, which was 2,114 mcf/day lower than the Plan estimate. Watering out of two shallow gas wells (A271, A301) is the primary cause for the difference.
- Water injection averaged 1,032,336 bbls/day, which was 26,414 bbls/day lower than originally estimated in the Plan. Gross production averaged 974,080 bbls/day, which was 28,533 bbls/day lower than estimated.
- The average price for Unit crude was \$60.9/bbl during the Plan period. The Plan was based on \$55.0/bbl crude. The average price for Unit gas was \$5.2/mcf, and the Plan was based on \$7.00/mcf.

- . The Plan included \$842,000 for the wells and facility abandonment expenses. Actual abandonment expense was \$619,000 primarily due to the facility abandonments. Well abandonment expense was minimal.

Budget to Actual Variance

The budget for the Operating Expense category was \$114.3 million, of which \$93.2 million, or 82 percent, was spent. The lower spending level was primarily related to lower electricity costs due to lower actual SCE tariffs and fuel costs for power plant usage. 24 IWW projects were completed at an average cost of \$302,000 per project, which was higher than the 20 IWW projects in the Plan at an average cost of \$250,000.

FACILITIES, MAINTENANCE, AND PLANT

The Facilities, Maintenance, and Plant Category provides funds for maintenance, repairs, upgrades, additions of surface facilities and pipelines, and costs for general field services.

Operations Review

Projects with significant expenditures during the fiscal year include the following:

- . Amine Plant
- . Facility Capacity Injection and Electrical
- . Grissom Material and Shop Construction
- . Pier J 12KV Harmonic Filter Installation
- . Facility Capacity Phase 3
- . J2 to Shipping Piping
- . Chaffee Sand Filter/Receiving Tank
- . JL-2 & JBM Pipeline Encasement
- . Cellar 1 Culvert Piping Replacement
- . Facility Capacity Phase 1 – Water Plants
- . White Produced Water Piping Replacement

Budget to Actual Variance

The Facilities, Maintenance, and Plant Category had a budget of \$87.8 million, of which \$84 million, or 95 percent, was spent.

UNIT FIELD LABOR AND ADMINISTRATIVE

The Unit Field Labor and Administrative Category provides funding for salaries, benefits, training, and other expenses of all Unit personnel, and costs for other Unit support activities. Unit support activities include costs for professional and temporary services, data processing and general office equipment and materials, Unit Operator billable costs, Oxy Long Beach, Inc. billable costs, management projects, extraordinary losses and claims, and prior year adjustments.

Budget to Actual Variance

The Unit Field Labor and Administrative category had a budget of \$58.3 million, of which \$50.1 million, or 86 percent, was spent.

The Unit Field Labor and Administrative category spending was below Plan primarily due to lower actual headcount than the Plan estimate.

TAXES, PERMITS, AND ADMINISTRATIVE OVERHEAD

The Taxes, Permits, and Administrative Overhead Category provides funding for specific taxes, permits, licenses, land leases, and all administrative overhead costs for the Unit.

Budget to Actual Variance

The Taxes, Permits, and Administrative Overhead category had a budget of \$35.2 million, of which \$40.7 million, or 116 percent, was spent.

The Taxes, Permits, and Administrative Overhead category spending was over primarily due to the increase in property taxes.

SUMMARY

The Long Beach Unit Annual Plan budget for the period July 1, 2008 to June 30, 2009 was \$385.6 million, of which \$329.5 million, or 85 percent, was spent. Higher realized oil prices and lower operating cost than the Plan has resulted in fiscal year profit of \$310.5 million in comparison to \$200.0 million originally estimated in the Plan.

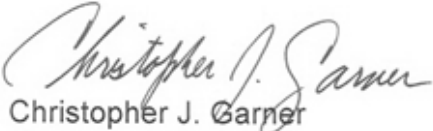

Significant effort was made during the Plan period to achieve best-in-class waterflood performance paramount to increasing the long-term value for the Unit. The development program was successfully implemented, which was optimized for capital investment and cash flow, while maintaining focus on health, environment and safety. Your concurrence with this Final Report and Closing Statement of the Annual Plan is requested.

Mr. Greg Scott

BUDGET RECONCILIATION

Attached are the July 1, 2008 through June 30, 2009 Budget Statement for Fiscal Year Projects; Annual Plan Economic Projections; Major Planning Assumptions; rates and volumes of oil, gas, and water production and water injection by location and zone; and an end-of-the-period report of number of wells.

Sincerely,

Christopher J. Garner
